5 There are only red sweets and yellow sweets in a bag.

There are n red sweets in the bag.

There are 8 yellow sweets in the bag.

Sajid is going to take at random a sweet from the bag and eat it.

He says that the probability that the sweet will be red is  $\frac{7}{10}$ 

(a) Show why the probability cannot be  $\frac{7}{10}$ 

(3)

After Sajid has taken the first sweet from the bag and eaten it, he is going to take at random a second sweet from the bag.

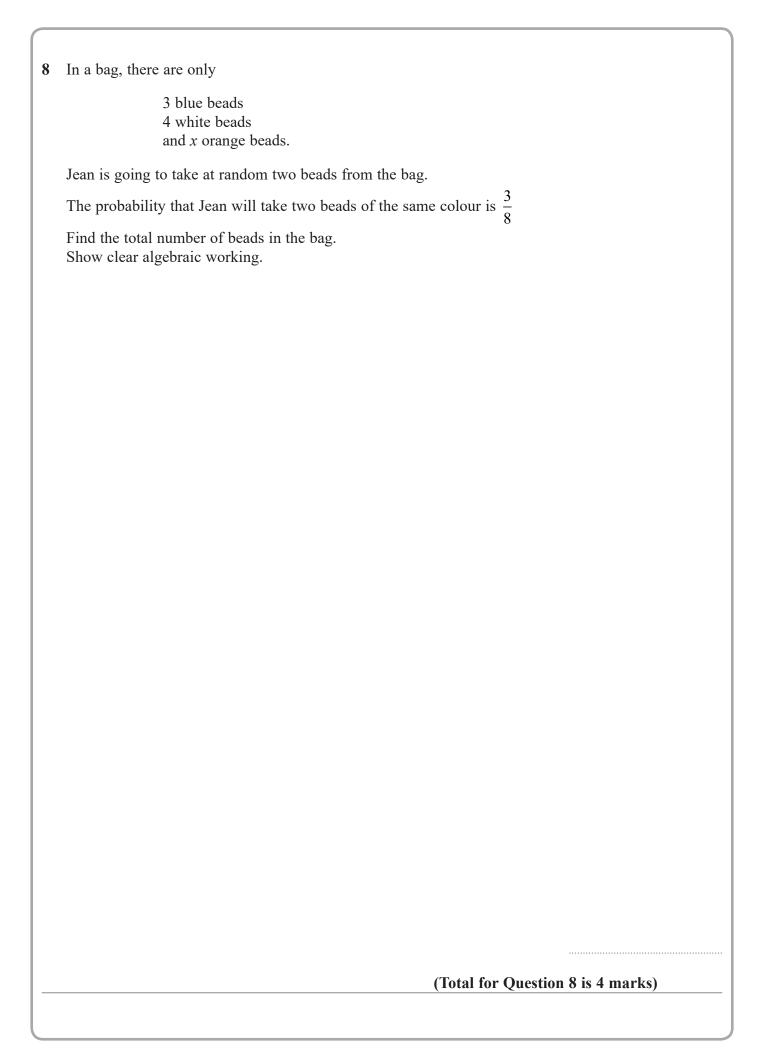

Given that the probability that both the sweets he takes will be red is  $\frac{3}{5}$ 

(b) work out the number of red sweets in the bag. You must show all your working.

## 12 Elliot has x counters.

Each counter has one red face and one green face.

Elliot spreads all the counters out on a table and sees that the number of counters showing a red face is 5

Elliot then picks at random one of the counters and turns the counter over. He then picks at random a second counter and turns the counter over.

The probability that there are still 5 counters showing a red face is  $\frac{19}{32}$ 

Work out the value of *x* Show clear algebraic working.

| 13 Pippa has a box containing $N$ pens.  |   |
|--|---|
| There are only black pens and red pens in the box.  The number of black pens in the box is 3 more than the number of red pens. |   |
| Pippa is going to take at random 2 pens from the box.  |   |
| The probability that she will take a black pen <b>followed</b> by a red pen is $\frac{9}{35}$                                  |   |

| 16 | There are only green pens and blue pens in a box.   |
|----|---|
|    | There are three more blue pens than green pens in the box.  There are more than 12 pens in the box. |
|    | Simon is going to take at random two pens from the box.   |
|    | The probability that Simon will take two pens of the same colour is $\frac{27}{55}$                 |
|    | Work out the number of green pens in the box.   |
