1	The number of animals in a population at the start of year $t$ is $P_t$ . The number of animals at the start of year 1 is 400
	Given that
	$P_{t+1} = 1.01P_t$
	work out the number of animals at the start of year 3
	(Total for Question 1 is 2 marks)

2	At time $t = 0$ hours a tank is full of water.
	Water leaks from the tank. At the end of every hour there is 2% less water in the tank than at the start of the hour.
	The volume of water, in litres, in the tank at time $t$ hours is $V_t$
	Given that
	$V_0 = 2000$ $V_{t+1} = kV_t$
	write down the value of $k$ .
	$k = \dots$
_	(Total for Question 2 is 1 mark)

At the start of the following year the population of the species is given by $P_{n+1} = kP_n  \text{where } k \text{ is a positive constant.}$ The population of the species at the start of year 1 is 8 million.  The population of the species at the start of year 2 is 6 million.  (a) Work out the population of the species at the start of year 3  At the start of year 5 the value of $k$ is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?  You must give a reason for your answer.	$P_{n+1} = kP_n  \text{where } k \text{ is a positive constant.}$ The population of the species at the start of year 1 is 8 million. The population of the species at the start of year 2 is 6 million.  (a) Work out the population of the species at the start of year 3 $= \frac{mil}{3}$ At the start of year 5 the value of $k$ is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	$P_{n+1} = kP_n$ where $k$ is a positive constant.  on of the species at the start of year 1 is 8 million.  on of the species at the start of year 2 is 6 million.  the population of the species at the start of year 3
The population of the species at the start of year 1 is 8 million.  The population of the species at the start of year 2 is 6 million.  (a) Work out the population of the species at the start of year 3	The population of the species at the start of year 1 is 8 million.  The population of the species at the start of year 2 is 6 million.  (a) Work out the population of the species at the start of year 3	on of the species at the start of year 1 is 8 million.  on of the species at the start of year 2 is 6 million.  the population of the species at the start of year 3  million  (3)  f year 5 the value of k is increased by 0.3 to a new constant value.  s that from the start of year 5 the population of the species would increase  correct?
The population of the species at the start of year 2 is 6 million.  (a) Work out the population of the species at the start of year 3  ———————————————————————————————————	The population of the species at the start of year 2 is 6 million.  (a) Work out the population of the species at the start of year 3  mil  (3)  At the start of year 5 the value of <i>k</i> is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	million of the species at the start of year 2 is 6 million.  the population of the species at the start of year 3  million  (3)  f year 5 the value of $k$ is increased by 0.3 to a new constant value.  s that from the start of year 5 the population of the species would increase correct?
		million (3) $\frac{1}{3}$ where $\frac{1}{3}$ is increased by 0.3 to a new constant value. So that from the start of year 5 the population of the species would increase correct?
At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	f year 5 the value of k is increased by 0.3 to a new constant value.  s that from the start of year 5 the population of the species would increase correct?
At the start of year 5 the value of <i>k</i> is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	f year 5 the value of k is increased by 0.3 to a new constant value.  s that from the start of year 5 the population of the species would increase correct?
At the start of year 5 the value of <i>k</i> is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	f year 5 the value of k is increased by 0.3 to a new constant value.  s that from the start of year 5 the population of the species would increase correct?
At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	f year 5 the value of k is increased by 0.3 to a new constant value.  s that from the start of year 5 the population of the species would increase correct?
At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	f year 5 the value of k is increased by 0.3 to a new constant value.  s that from the start of year 5 the population of the species would increase correct?
At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	f year 5 the value of k is increased by 0.3 to a new constant value.  s that from the start of year 5 the population of the species would increase correct?
At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	f year 5 the value of k is increased by 0.3 to a new constant value.  s that from the start of year 5 the population of the species would increase correct?
At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	f year 5 the value of k is increased by 0.3 to a new constant value.  s that from the start of year 5 the population of the species would increase correct?
At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	At the start of year 5 the value of k is increased by 0.3 to a new constant value.  Louise thinks that from the start of year 5 the population of the species would increase year on year.  (b) Is Louise correct?	f year 5 the value of $k$ is increased by 0.3 to a new constant value. So that from the start of year 5 the population of the species would increase correct?
year on year.  (b) Is Louise correct?	year on year.  (b) Is Louise correct?	correct?

4	At the start of year $n$ , the number of animals in a population is $P_n$
	At the start of the following year, the number of animals in the population is $P_{n+1}$ where
	$P_{n+1} = kP_n$
	At the start of 2017 the number of animals in the population was 4000 At the start of 2019 the number of animals in the population was 3610
	Find the value of the constant $k$ .
	(Total for Question 4 is 3 marks)

5	A hot air balloon is descending. The height of the balloon $n$ minutes after it starts to descend is $h_n$ metres.
	The height of the balloon $(n + 1)$ minutes after it starts to descend, $h_{n+1}$ metres, is given by
	$h_{n+1} = K \times h_n + 20$ where K is a constant.
	The balloon starts to descend from a height of 1200 metres at 0915 At 0916 the height of the balloon is 1040 metres.
	Work out the height of the balloon at 0918
	m

6 The profit made by a shop increases each year.

The profit made by the shop in year n is  $\pounds P_n$ 

Given that the profit made by the shop in the next year is  $\pounds P_{n+1}$  then

$$P_{n+1} = aP_n + 800$$
 where a is a constant.

The table shows the profit made by the shop in 2018 and in 2019

Year	2018	2019
Profit	£24000	£29600

Work out the profit predicted to be made by the shop in 2021

t

7	The number of rabbits on a farm at the end of month $n$ is $P_n$ . The number of rabbits at the end of the next month is given by $P_{n+1} = 1.2P_n - 50$	
	At the end of March there are 200 rabbits on the farm.	
	(a) Work out how many rabbits there will be on the farm at the end of June.	
		(3)
	(b) Considering your results in part (a), suggest what will happen to the number of	(3)
