1 Here are the first four terms of a sequence of fractions.

$$\frac{1}{1}$$
  $\frac{2}{3}$   $\frac{3}{5}$   $\frac{4}{7}$ 

The numerators of the fractions form the sequence of whole numbers  $1 \ 2 \ 3 \ 4 \dots$  The denominators of the fractions form the sequence of odd numbers  $1 \ 3 \ 5 \ 7 \dots$ 

(a) Write down an expression, in terms of n, for the nth term of this sequence of fractions.

**(2)** 

(b) Using algebra, prove that when the square of any odd number is divided by 4 the remainder is 1

(3)

4 The table gives information about the first six terms of a sequence of numbers.

Term number	1	2	3	4	5	6
Term of sequence	$\frac{1\times2}{2}$	$\frac{2\times3}{2}$	$\frac{3\times4}{2}$	$\frac{4\times5}{2}$	$\frac{5\times 6}{2}$	$\frac{6\times7}{2}$

Prove algebraically that the sum of any two consecutive terms of this sequence is always a square number.

(Total for Question 4 is 4 marks)

5	Using algebra, prove that, given any 3 consecutive even numbers, the difference between the square of the largest number and the square of the smallest number is always 8 times the middle number.
	(Total for Question 5 is 3 marks)

6	Prove that	
		$(2n+3)^2 - (2n-3)^2$ is a multiple of 8
	for all positive integer value	s of n.
