1 Ding is going to play one game of snooker against each of two of his friends, Marco and Judd.

The probability tree diagram gives information about the probabilities that Ding will win or lose each of these two games.

(a) Work out the probability that Ding will win both games.

(2)

(b) Work out the probability that Ding will win exactly one of the games.

(3)

(Total for Question 1 is 5 marks)

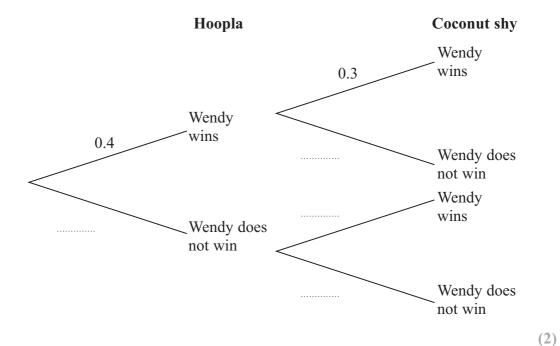

2 Wendy goes to a fun fair.

She has one go at Hoopla.

She has one go on the Coconut shy.

The probability that she wins at Hoopla is 0.4 The probability that she wins on the Coconut shy is 0.3

(a) Complete the probability tree diagram.

(b) Work out the probability that Wendy wins at Hoopla and also wins on the Coconut shy.

(2)

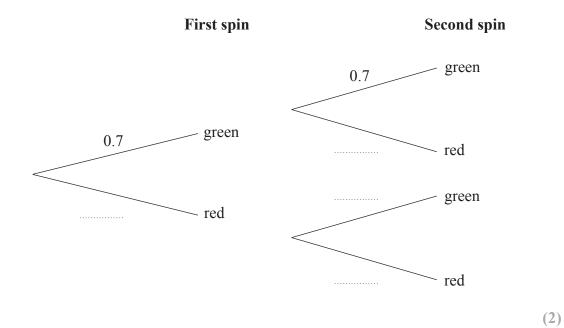

(Total for Question 2 is 4 marks)

3 Louise makes a spinner.

The spinner can land on green or on red. The probability that the spinner will land on green is 0.7

Louise spins the spinner twice.

(a) Complete the probability tree diagram.

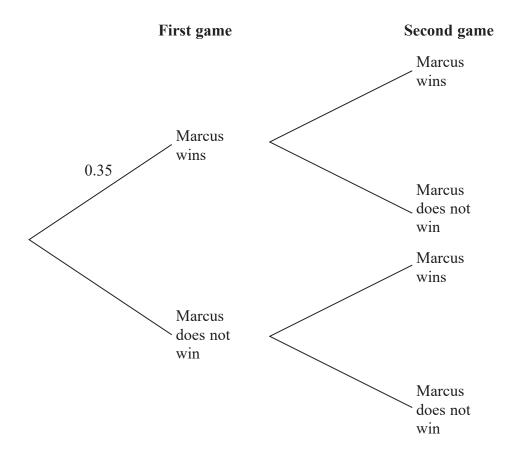

(b) Work out the probability that the spinner lands on two different colours.

(3)

(Total for Question 3 is 5 marks)

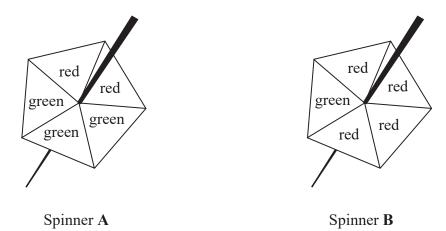

- 4 Marcus plays two games of tennis. For each game, the probability that Marcus wins is 0.35
 - (a) Complete the probability tree diagram.

(b) Work out the probability that Marcus wins at least one of the two games of tennis.

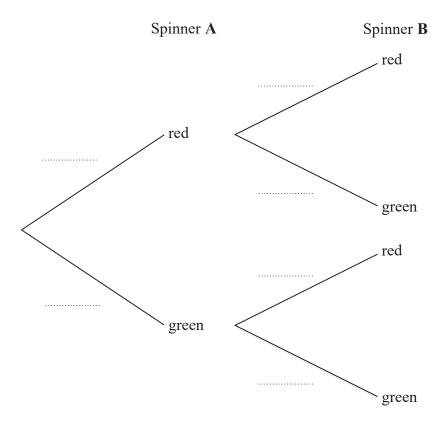

(3)

5 Harry has two fair 5-sided spinners.

Harry is going to spin each spinner once.

(a) Complete the probability tree diagram.

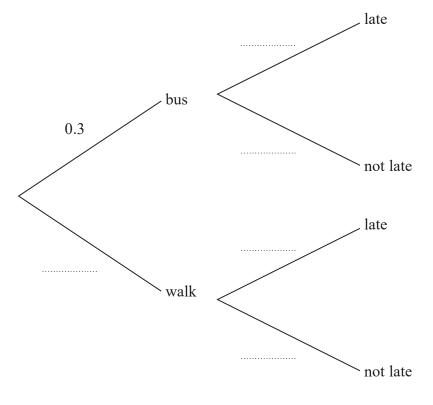

((b) Work out the probability that at least one of the spinners will land on green.

6 Each day that Barney goes to college, he either goes by bus or he walks. The probability that Barney will go to college by bus on any day is 0.3

When Barney goes to college by bus, the probability that he will be late is 0.2 When Barney walks to college, the probability that he will be late is 0.1

(a) Complete the probability tree diagram.

Barney will go to college on 200 days next year.

(b) Work out an estimate for the number of days Barney will be late for college next year.

(4)

(2)

(Total for Question 6 is 6 marks)

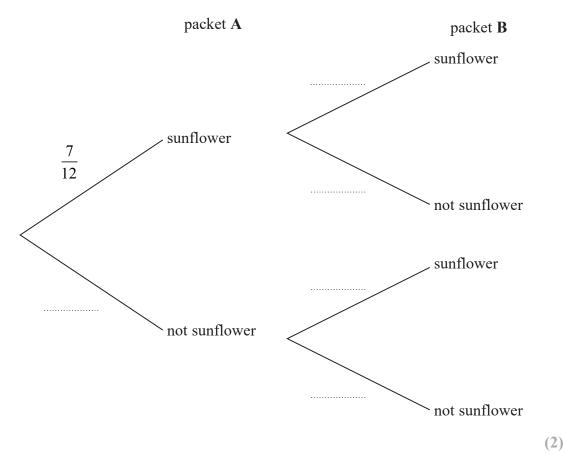

7 Aika has 2 packets of seeds, packet A and packet B

There are 12 seeds in packet A and 7 of these are sunflower seeds.

There are 15 seeds in packet **B** and 8 of these are sunflower seeds.

Aika is going to take at random a seed from packet A and a seed from packet B

(a) Complete the probability tree diagram.

(b) Calculate the probability that Aika will take two sunflower seeds.

(2)

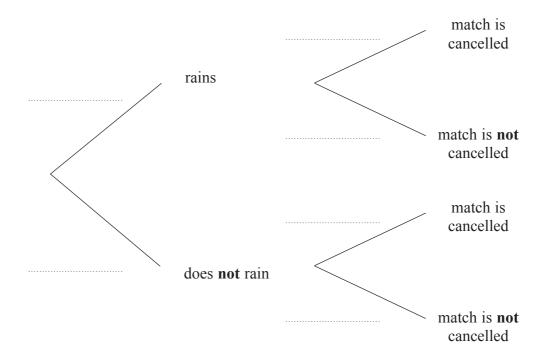

(Total for Question 7 is 4 marks)

8 The probability that it will rain on a day in June is 0.2

When it rains the probability that my tennis match is cancelled is 0.7

When it does **not** rain, the probability that my tennis match is **not** cancelled is 0.95

(a) Complete the probability tree diagram for this information.

(3)

(b) Work out the probability that, on a day in June, it does **not** rain and my tennis match is cancelled.

(2)

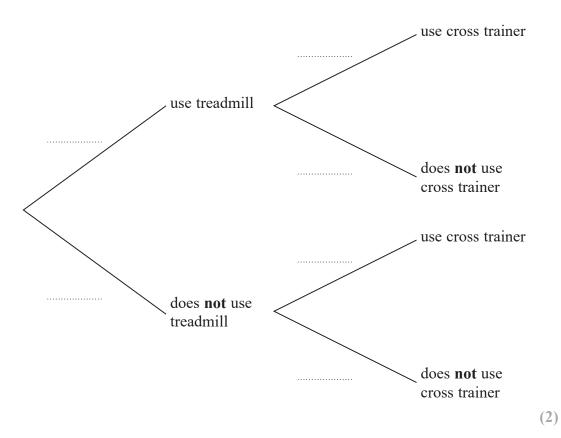

(Total for Question 8 is 5 marks)

9 Rudolf goes to the gym.

The probability that he will use the treadmill is 0.8

When he uses the treadmill, the probability that he will use the cross trainer is 0.3 When he does **not** use the treadmill, the probability that he will use the cross trainer is 0.6

(a) Complete the probability tree diagram for this information.

(b) Work out the probability that Rudolf uses both the treadmill and the cross trainer.

(2)

(Total for Question 9 is 4 marks)

10 There are two bags of counters, bag X and bag Y.

There are 20 counters in bag X.

11 of the counters are blue and the rest are red.

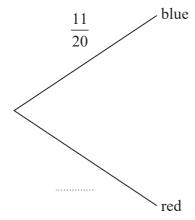

There are 16 counters in bag Y.

9 of the counters are blue and the rest are red.

Arkady takes at random a counter from bag X and takes at random a counter from bag Y.

(a) Complete the probability tree diagram.

bag Y

(3)

(b) Work out the probability that the two counters are both red.	
	(2)
(c) Work out the probability that the two counters are both red or are both blue.	
(Total for Overtion 10	(3)
(Total for Question 10	is 8 marks)

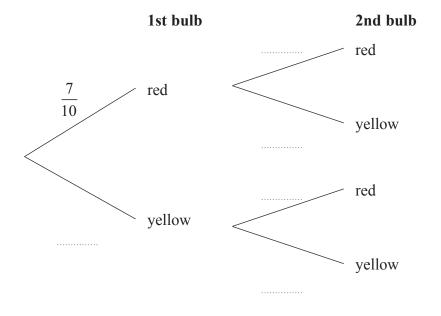

11 Yvonne has 10 tulip bulbs in a bag.

7 of the tulip bulbs will grow into red tulips.

3 of the tulip bulbs will grow into yellow tulips.

Yvonne takes at random two tulip bulbs from the bag. She plants the bulbs.

(a) Complete the probability tree diagram.

(b) Work out the probability that at least one of the bulbs will grow into a yellow tulip.

(3)

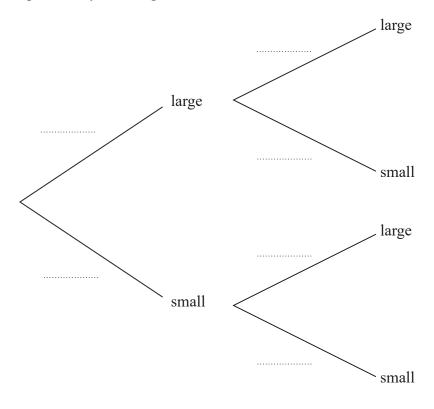

(2)

(Total for Question 11 is 5 marks)

- 12 There are 20 glasses in a cupboard.
 - 13 of the glasses are large 7 of the glasses are small

Roberto takes at random two glasses from the cupboard.

(a) Complete the probability tree diagram.

(b) Work out the probability that Roberto takes two small glasses.

(2)

(2)

(Total for Question 12 is 4 marks)

13 Felix has 10 cards.

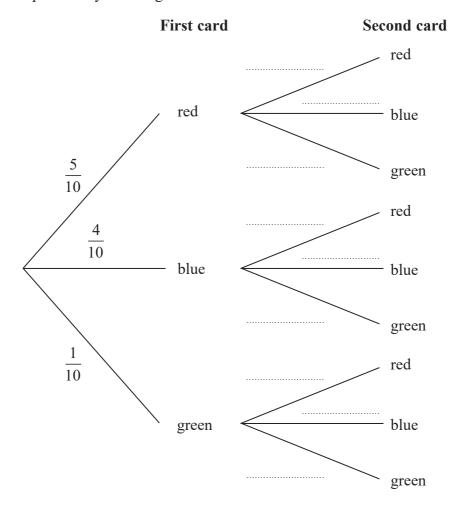

There are 5 red cards, 4 blue cards and 1 green card.

Felix takes at random one of the cards.

He does not replace the card.

Felix then takes at random a second card.

(a) Complete the probability tree diagram.

(b) Work out the probability that Felix takes at least one blue card and no green card.

(3)

14 Hector has a bag that contains 12 counters.

There are 7 green counters and 5 red counters in the bag.

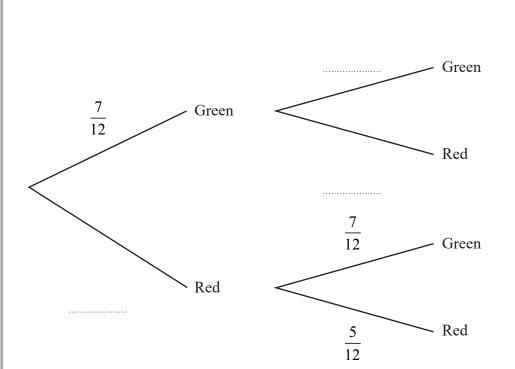

First counter

Hector takes at random a counter from the bag. He looks at the counter and puts the counter back into the bag.

Hector then takes at random a second counter from the bag. He looks at the counter and puts the counter back into the bag.

Second counter

(a) Complete the probability tree diagram.

(b) Work out the probability that both counters are red.

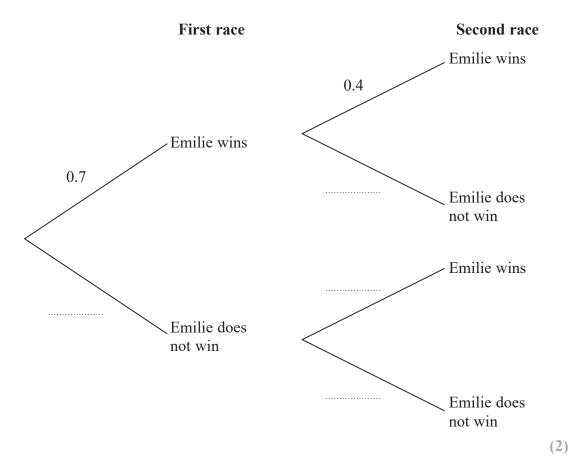

(2)

Meghan has a jar containing 15 counters. There are only blue counters, green counters and red counters in the jar.	
Hector is going to take at random one of the counters from his bag of 12 counters. He will look at the counter and put the counter back into the bag.	
Hector is then going to take at random a second counter from his bag. He will look at the counter and put the counter back into the bag.	
Meghan is then going to take at random one of the counters from her jar of counters. She will look at the counter and put the counter back into the jar.	
The probability that the 3 counters each have a different colour is $\frac{7}{24}$	
(c) Work out how many blue counters there are in the jar.	
(3) (Total for Question 14 is 7 marks)	

15 Emilie takes part in two races.

The probability that she wins the first race is 0.7 The probability that she wins the second race is 0.4 The outcomes of the two races are independent.

(a) Complete the probability tree diagram.

(b) Work out the probability that Emilie wins exactly one of the two races.

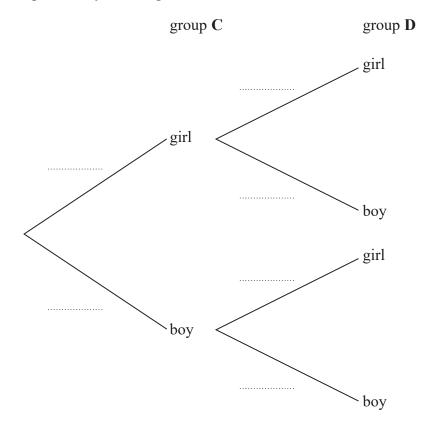

(3)

	ng to take part in a				
f she wins both of the first two races, the probability that she will win the third race is 0.6					
f she wins exactly one of the first two races, the probability that she will win the third race is 0.3					
(c) Work out	Work out the probability that Emilie will win exactly two of the three races.				
					(3)

	(Total for Question 16 is 7 marks)

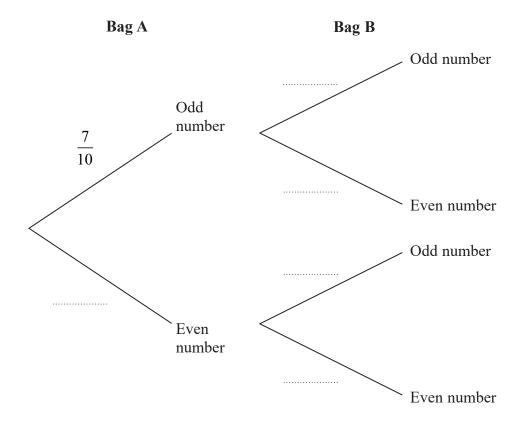

17 Cody has two bags of counters, bag A and bag B.

Each of the counters has either an odd number or an even number written on it.

There are 10 counters in bag **A** and 7 of these counters have an **odd** number written on them. There are 12 counters in bag **B** and 7 of these counters have an **odd** number written on them.

Cody is going to take at random a counter from bag A and a counter from bag B.

(a) Complete the probability tree diagram.

(b) Calculate the probability that the total of the numbers on the two counters will odd number.	ii de an
	(3)
Harriet also has a bag of counters. Each of her counters also has either an odd number or an even number writte	n on it.
Harriet is going to take at random a counter from her bag of counters.	
The probability that the number on each of Cody's two counters and the num	ber on
Harriet's counter will all be even is $\frac{3}{100}$	
(c) Find the least number of counters that Harriet has in her bag. Show your working clearly.	
	(3)
(Total for Question 17	is 8 marks)

18	There are 9 counters in a bag.
	7 of the counters are green. 2 of the counters are blue.
	Ria takes at random two counters from the bag.
	Work out the probability that Ria takes one counter of each colour. You must show your working.
	(Total for Question 18 is 4 marks)

4.0			
19	There are only 3 red counters and 5 yellow counters in a bag.		
	Jude takes at random 3 counters from the bag.		
	Work out the probability that he takes exactly one red counter.		
	(Total for	Question	19 is 4 marks)

20	Marek has 9 cards. There is a number on each card.
	1 2 3 4 5 6 7 8 9
	Marek takes at random two of the cards. He works out the product of the numbers on the two cards.
	Work out the probability that the product is an even number.
	(Total for Question 20 is 3 marks)

21	21 Ray has nine cards numbered 1 to 9					
	1 2 3 4 5 6 7 8 9					
	Ray takes at random three of these cards.					
	He works out the sum of the numbers on the three cards and records the result.					
	Work out the probability that the result is an even number.
